

# Cola volcano

At-home science experiment

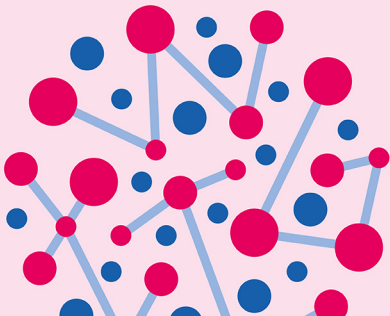

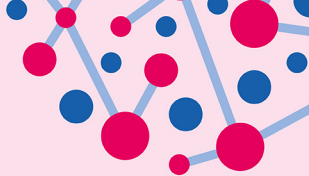

## You will need:

- A bottle of diet cola
- A packet of mints
- A paper tube (or a rolled up paper) with an opening about the size of the bottle
- A piece of card – it can be paper or plastic
- Tape

1. Find a place where you don't mind some mess, like the garden or the garage.
2. Open the cola bottle and place it near the ground.
3. Fasten tape to the end of a slim paper tube (could be just a rolled up paper!) and fill it with a pack of mints.

4. Place a card over the top of the tube and flip it over.

5. Line the tube up with the opening of the bottle, then slide out the card so that the mints fall straight in.

6. Step away quickly so you don't get covered in cola!

Find out more about the science of the experiment in the description of this post.
